CIS—Continuous Improvement Software

Corporate Objectives.
Management Solutions.
Compliance to Standards.
Management of Risks.

“We help Companies chart their future”

- Quality Management
- Environmental Management
- Training
- Software Solutions
- On-Line Solutions
- Management Solutions

CIS, Continuous Improvement Software is a SaaS Cross-Platform Business (X-Engineering) solution for managing (without paper) all elements of an organization including ISO 9001:2008, AS9100, NADCAP and FAA requirements. It is simple to use, simple to start and most of all simple to maintain. It has proven itself in hundreds of companies.

Finally, A Comprehensive & Affordable Software Solution!

CIS was developed to address the needs of companies worldwide who wish to work with a paperless management system, specifically those companies who are certified to ISO 9001:2008 and/or AS 9100.

Since its first release, CIS has grown outside its boundaries of compliance and now offers solutions for job management, inventory management, sales and marketing and many other simple-to-use tools to manage all of your business.

CIS Continuous Improvement

Software includes a comprehensive list of modules (tools to manage) that are fully integrated with each other in one software package. CIS includes tools for risk management, quality management, human resource and training management, complete documentation on-line including approval and revision controls, preventive action, calibration, inventory management and inspection are just a few of the available modules in CIS Continuous Improvement Software. Best of all, CIS Continuous Improvement Software includes on-

line help videos, seminars, PowerPoint shows and much more information in each module's help section that makes learning and implementation a breeze. In fact, most people can start using CIS in less than an hour on their own!

As a Certified CIS Reseller, we can offer implementation and training assistance performed by Certified CIS Consultants. Additionally, our consultants can help with procedures, system design and/or a complete package to meet your needs.

CIS software is licensed for use and there is a small upfront set-

up fee and then a monthly support and licensing fee. The monthly fee includes all future revisions to CIS Software, complete security system to protect your data, all uploaded files and procedure management and storage, complete back-up service, 24/7 toll free help line, support by e-mail from your consultant, and instant access to your system from where ever you are in the world!

Contact your reseller (information on back of this brochure) and arrange for an on-line demonstration of CIS Software. Also, visit us at www.cissoftware.com.

Rick Erickson, President and Owner

WIRE-TECH, INC.

Wire-Tech, Inc. in Tempe, Arizona has received the certificate of Nadcap accreditation from The Performance Review Institute for Small Hole, Wire and Conventional EDM. Wire-Tech, Inc. also achieved ISO9001:2000 and AS9100 certifications earlier last year.

Wire-Tech's use of a revolutionary new software called CIS (Continuous Improvement Software) to implement and maintain their management system was integral in their achievement of these accreditation and certifications.

Both the Nadcap and AS9100 auditors were impressed with the ease of auditing our system due to the ease of navigating our totally paperless system within CIS. We are the first EDM Machining company to use CIS software to manage all aspects of our business including customer feedback, nonconformity, training, vendor evaluation and analysis of data; virtually every requirement of AS9100 is addressed in this software.

Keith Dungan, G.M.

ADVOTECH COMPANY INC.

Anyone that knows me would probably tell you that I am pretty much skeptical of everything. Basically prove it to me first then I'll believe it. Management people today are constantly bombarded with all sorts of products, programs and gimmicks that will improve your business. I've found that very few really do. Take it from an eternal skeptic, "CIS is the exception." I frankly cannot imagine going back to our old ways.
